

**THE FIRST GLOBELICS CONFERENCE:
INNOVATION SYSTEMS AND DEVELOPMENT
STRATEGIES FOR THE THIRD MILLENNIUM**

**FORMS OF GOVERNANCE, LEARNING
MECHANISMS AND LOCALIZED INNOVATION: A
COMPARATIVE ANALYSIS IN LOCAL PRODUCTIVE
SYSTEMS IN BRAZIL**

Renato Ramos Campos

Marco Antonio Vargas

Rio de Janeiro, November 3-6, 2003

THE FIRST GLOBELICS CONFERENCE: INNOVATION SYSTEMS AND DEVELOPMENT STRATEGIES FOR THE THIRD MILLENNIUM

Objectives/Research Questions

- Explore some of the possible configurations emerging from the interaction between diverse productive and knowledge structures within local productive systems in developing countries
- Explore the impact of these diverse configurations on the shaping of interactive learning mechanisms and innovative strategies

How the diverse organisational and institutional characteristics of local productive systems in developing countries affect their learning strategies and capabilities for innovation?

THE FIRST GLOBELICS CONFERENCE: INNOVATION SYSTEMS AND DEVELOPMENT STRATEGIES FOR THE THIRD MILLENNIUM

Exploratory framework

- Based on an analytical distinction between Systems of production and Systems of knowledge: Explores the interaction between the main elements associated with the organisation of productive activities and those elements related to the organisation of knowledge flows

THE FIRST GLOBELICS CONFERENCE: INNOVATION SYSTEMS AND DEVELOPMENT STRATEGIES FOR THE THIRD MILLENNIUM

Theoretical framework

Departs from the National systems of innovation approach: innovation as a interactive, path-dependent process, embedded in specific institutional contexts.

Highlights the relationship between proximity, learning and innovation: focus on the localized nature of learning and innovation processes

THE FIRST GLOBELICS CONFERENCE: INNOVATION SYSTEMS AND DEVELOPMENT STRATEGIES FOR THE THIRD MILLENNIUM

Empirical Basis

Five selected case studies on agro-industrial and industrial agglomerations in the South of Brazil :

- a) In the State of Rio Grande do Sul: The tobacco agro-industrial complex - Rio Pardo Valley, The wine agro-industrial complex - Serra Gaúcha region; The leather-footwear cluster - Sinos-Valley
- b) In the State of Santa Catarina: The textile and clothing - Itajai Valley; The software - Joinville city

These case studies comprise part of the 26 local productive and innovative arrangements analysed in Brazil, from 1998 to 2000, and reflects an ongoing research effort carried out by RedeSist .

THE FIRST GLOBELICS CONFERENCE: INNOVATION SYSTEMS AND
DEVELOPMENT STRATEGIES FOR THE THIRD MILLENNIUM

Common features about National Systems of Innovation in a Developing Country context

(Cassiolato and Lastres, Arocena and Sutz, Villashi, Viotti, Albuquerque, etc.)

- Reduced investments in R&D activities
- Great instability in the macroeconomic, political and financial environment
- Higher diversity and instability of institutional frameworks supporting innovative activities
- Lack of interaction between most of the actors comprising systems of innovation
- High significance of external flows of knowledge in the technological upgrade of firms

THE FIRST GLOBELICS CONFERENCE: INNOVATION SYSTEMS AND DEVELOPMENT STRATEGIES FOR THE THIRD MILLENNIUM

Some common features about Local Productive and Innovative Systems in Brazil

- Deep impacts on competitive and innovative dynamic emerging from structural reforms in 1990s (deregulation, privatisation, etc);
- Important bottlenecks concerning financing for SMEs and human resource capabilities;
- Knowledge infrastructure focused mainly in training and labour technical development;
- Low tendency to develop interactive learning processes – either along the productive chain (user-producer) or with support organisations (technological and training infrastructure, industry associations, etc).

I- The institutional and organisational dimension of production systems

Focused on the density of productive structure at local level, degree of specialisation and existence of productive complementarities associated to the organisation of productive flows within local productive chains, entails:

- a) division of labour within the local productive chain and;
- b) Predominant and complementary forms of governance

I- The institutional and organisational dimension of production systems

- a) Division of labour on the local productive chain:
number and size of firms; degree of complementarities

- b) Predominant and complementary forms of governance: networks and hierarchies

THE FIRST GLOBELICS CONFERENCE: INNOVATION SYSTEMS AND DEVELOPMENT STRATEGIES FOR THE THIRD MILLENNIUM

Table 1: Institutional and organisational dimension of the production systems

	Division of Labor			
	Low/ Few complementarities		High/ Many complementarities	
	Mostly SMEs	Some large firms and SMEs	Mostly SMEs	Some large firms and SMEs
Predominant forms of governance	Predominance of networks (Type 1)	Predominance of hierarchies (Type 2)	Predominance of networks (Type 3)	Predominance of hierarchies (Type 4)
Complementary forms of governance:	Public/private coordination (ie.industry associations)	Public/private coordination (ie.industry associations)	SMEs Networks of subcontractors	Networks of subcontractors SMEs Networks of subcontractors

II - Institutional and organisational dimension of knowledge systems

Focused on the role played by technology and training infrastructure and the nature of intra-firm learning mechanisms within agglomerations

Main analytical elements:

- 1) the technological and educational infrastructure**
- 2) 2) knowledge sources and intra-firm learning mechanisms**

II - Institutional and organisational dimension of knowledge systems

1) the technological and educational infrastructure:

- **takes into account the existence of physical infrastructure like technological and training institutes, business associations, and other support organisations that provide information, generate and diffuse knowledge within local productive systems.**

II - Institutional and organisational dimension of knowledge systems

2) knowledge sources and intra-firm learning mechanisms

- **Explores the (active/passive) role of firms in promoting learning processes and the (internal/external) origin of knowledge sources used to promote product and process innovation**

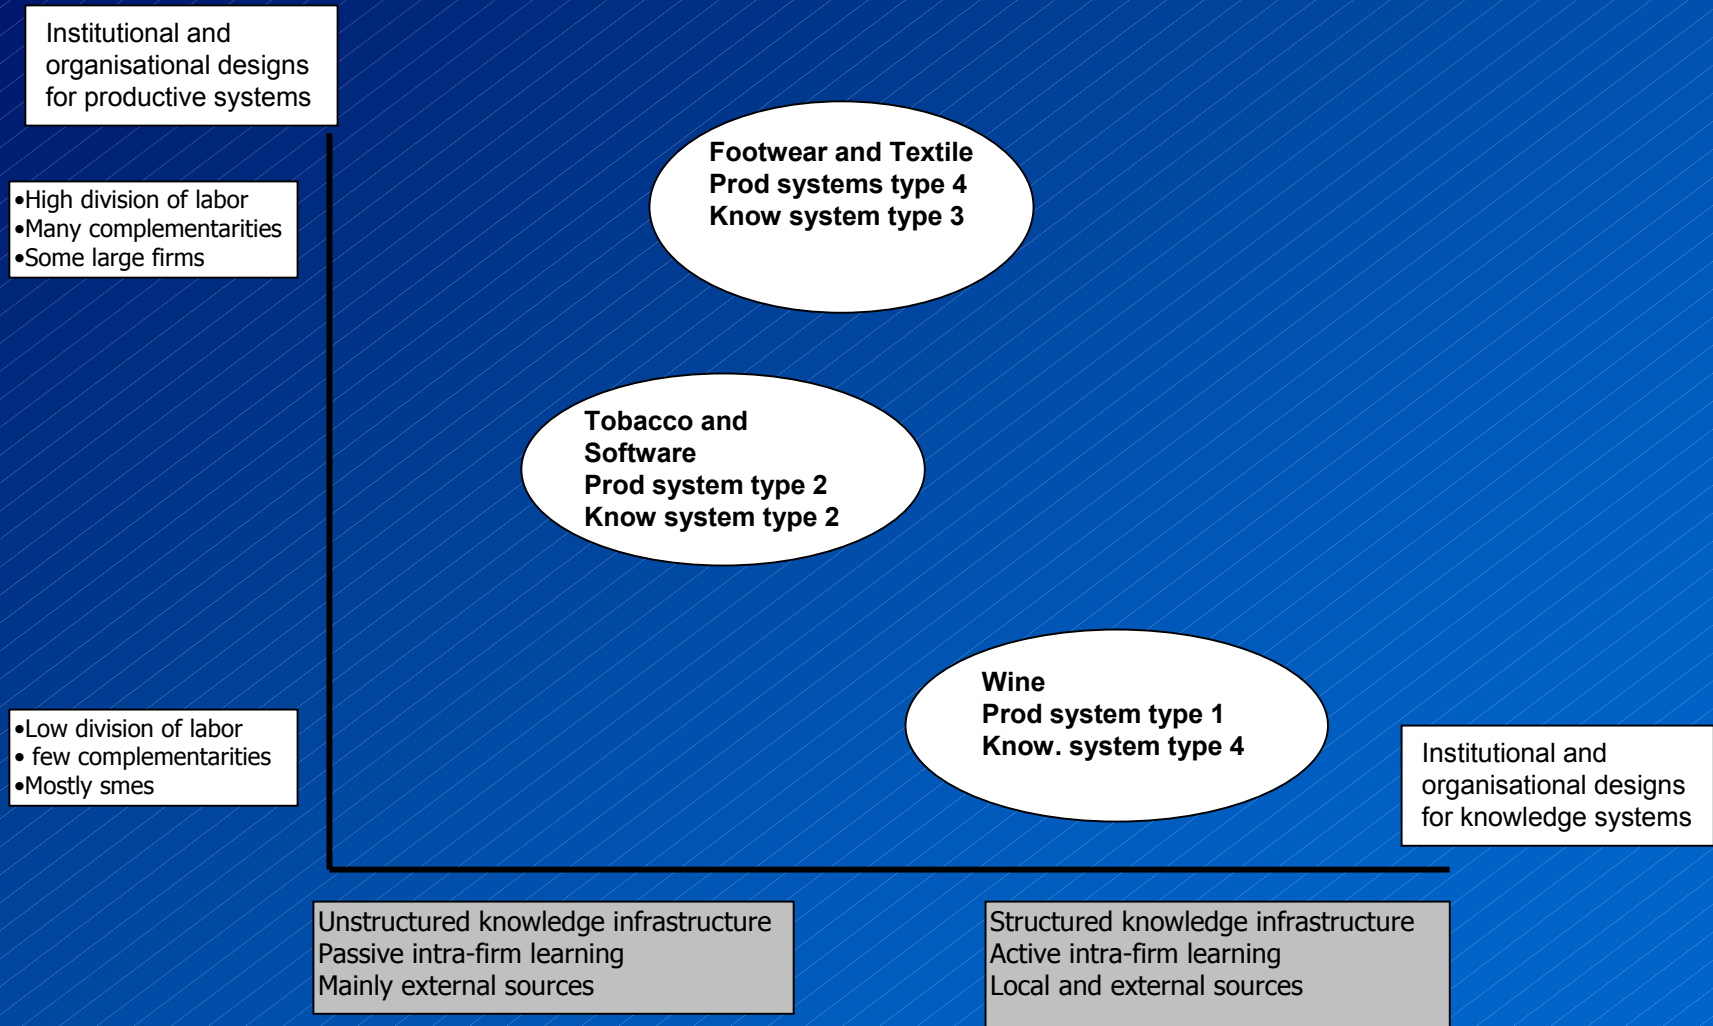

THE FIRST GLOBELICS CONFERENCE: INNOVATION SYSTEMS AND DEVELOPMENT STRATEGIES FOR THE THIRD MILLENNIUM

Table 2: Institutional and organizational dimension of knowledge systems

Role of technological and training organizations (knowledge infrastructure)			
Unstructured		Structured	
Intra-firms learning mechanisms			
Restricted and passive	Open and active	Restricted and passive	Open and active
<p>Type 1 Small or not-existent role of tech./training infrastructure and poor intra-firm learning mechanisms</p>	<p>Type 2 Small or not-existent role of tech./training infrastructure and active intra-firm learning mechanisms</p>	<p>Type 3 Persistent role of tech./training infrastructure and poor intra-firm learning mechanisms</p>	<p>Type 4 Persistent role of tech./training infrastructure and active intra-firm learning mechanisms</p>

THE FIRST GLOBELICS CONFERENCE: INNOVATION SYSTEMS AND DEVELOPMENT STRATEGIES FOR THE THIRD MILLENNIUM

THE FIRST GLOBELICS CONFERENCE: INNOVATION SYSTEMS AND DEVELOPMENT STRATEGIES FOR THE THIRD MILLENNIUM

Table 3: Local productive Systems in Brazil according to institutional and organisational characteristics of productive and knowledge systems

Categories/empirical cases	Footwear	Wine	Tobacco	Software	Textile
Systems of production	Mainly type 4	Type 1	Mainly type 2	Type2	Mainly type 4
Level of division of labor	High with some large firms	Low with mostly SMEs	Low with some large firms	Low with mostly SME	High with some large firms
Main governance modes	Hierarchies w/ network of subcontractors and global chains	Diffused networks w/ public private coordination	Hierarchies through global chains	Only public/private coordination	Diffused networks w/ public private coordination
Systems of knowledge	Type 3	Type 4	Type 2	Mainly type 2	Mainly type 3
Knowledge infrastructure	Structured	Structured	Unstructured	Unstructured with many training institutions	Structured
Intra-firms learning mechanisms	Restricted and passive learning-by-doing/using	Active and learning by searching and by interacting	Active Learning by searching	Active Learning by interacting with users	Restricted and passive learning-by-doing/using

THE FIRST GLOBELICS CONFERENCE: INNOVATION SYSTEMS AND DEVELOPMENT STRATEGIES FOR THE THIRD MILLENNIUM

Reflexes on productive and innovative capabilities

Categories/empirical cases	Footwear	Wine	Tobacco	Software	Textile
Impacts on inter-firms' linkages	High Incentives for mainly vertical linkages	High Incentives for mainly horizontal linkages	Low Incentives for linkages	Low Incentives for linkages	High Incentives for horizontal and vertical linkages
Impacts on local learning strategies	Broad but focused mainly on productive capabilities	Broad and focused on productive and innovative capabilities	Restrict (encapsulated within MNCs subsidiaries) focused on productive and innovative capabilities	Restrict (encapsulated within medium and large firms) focused on productive and innovative capabilities	Broad but focused mainly on productive capabilities

THE FIRST GLOBELICS CONFERENCE: INNOVATION SYSTEMS AND DEVELOPMENT STRATEGIES FOR THE THIRD MILLENNIUM

Concluding remarks

Territorial/Institutional specificities: A solely sectorial approach (sectorial systems) tends to neglect specificities emerging from institutional and historical contexts which are specific to territories.

Empirical evidences shown differences on innovative and learning capabilities among local productive systems belonging to the same industry.

THE FIRST GLOBELICS CONFERENCE: INNOVATION SYSTEMS AND DEVELOPMENT STRATEGIES FOR THE THIRD MILLENNIUM

Concluding remarks

Great variety in the patterns of division of labor and governance modes associated to systems of production on the one hand, and the knowledge structure and inter-firm learning mechanisms on the other.

There is not an one-to-one correspondence between different degrees of division of labor and governance modes, nor between knowledge infrastructure and intra-firm learning mechanisms

THE FIRST GLOBELICS CONFERENCE: INNOVATION SYSTEMS AND DEVELOPMENT STRATEGIES FOR THE THIRD MILLENNIUM

Concluding remarks

On the one hand, some configurations that combine an unstructured knowledge system with intra-firms' active learning strategies (like in the tobacco and software cases) reflects a weak basis for knowledge diffusion within the local productive system. (encapsulated innovation system; e.g: tobacco)

On the other hand, configurations that combine structured knowledge systems with restricted and passive intra-firms learning strategies will also difficulties to foster interactive learning mechanisms at local level. (eg. footwear, textile)

THE FIRST GLOBELICS CONFERENCE: INNOVATION SYSTEMS AND DEVELOPMENT STRATEGIES FOR THE THIRD MILLENNIUM

Further research:

- More comparative work on innovative dynamic of local productive systems in developing countries (empirical research)
- Explorations on the possible developmental tendencies of local productive systems according to changes in their productive and knowledge structures
- Development of indicators to Measure knowledge, cooperation and other intangibles

THE FIRST GLOBELICS CONFERENCE: INNOVATION SYSTEMS AND DEVELOPMENT STRATEGIES FOR THE THIRD MILLENNIUM

Structure

1. Objectives and research questions;
2. Key issues on the theoretical and analytical framework.
3. Common features concerning NSI in a developing country context;
4. Common features concerning local productive and innovative systems in Brazil
5. Analytical framework: Institutional and organisational dimension of productive and knowledge systems
6. Empirical evidences from Brazil
7. Concluding remarks and further research
